Mohammad Kamran Ikram

PhD Candidate, Electrical Engineering | Sessional Lecturer | Academic Senator | Swinburne University
mikram@swin.edu.au | Melbourne, Australia
kamran-ikram.github.io | LinkedIn | Google Scholar | ORCID 0000-0001-9830-3517

Research Profile

PhD candidate at Swinburne University of Technology researching how electric vehicles and peer-to-peer energy sharing can support grid stability in the transition to net zero. Industry and applied research experience as a Grid Connection Engineer at Siemens (PSS® E studies for a 250 MW battery) and as a Research Fellow at CSIRO (power system restoration with grid-forming and grid-following inverters). Author of 5 journal articles, including a 2026 cover article in World Electric Vehicle Journal, 5 conference papers (2 accepted in 2026), 2 book chapters and 1 published patent, with 3 more journal manuscripts under review.

Education

PhD, Electrical Engineering — Apr 2024 – Apr 2028 (expected)
Swinburne University of Technology, Melbourne, Australia

Research: Peer-to-peer energy sharing and electric vehicle control, modelled in PSS® E. Fully funded by the Siemens–Swinburne Energy Transition Hub.

PhD enrolment (withdrawn; transferred to Swinburne) — Apr 2023 – Mar 2024
Federation University Australia

Master of Technology, Instrumentation and Control Engineering — 2018 – 2020
Aligarh Muslim University, India | GPA 8.69 / 10

Thesis: Development of a reactive power transducer for static VAr compensator (SVC) applications.

Bachelor of Technology, Electrical Engineering — 2013 – 2017
Aligarh Muslim University, India

Research Interests

EV integration and charging optimisation · Peer-to-peer energy sharing · Power system restoration and black start · Grid-forming and grid-following inverters · Smart grids and microgrids · Battery energy storage grid studies · Real and reactive power measurement

Research and Professional Experience

Research Fellow — Nov 2025 – Jul 2026
CSIRO, Melbourne, Australia | AR-PST Stage 5: System Restoration and Black Start

- Evaluated how grid-forming (GFM) and grid-following (GFL) inverters can work together to replace synchronous generators in System Restart Ancillary Services (SRAS).
- Findings published in *Energies* (2026) on the coordinated operation and stability limits of GFM/GFL inverters in power system restoration.

Research Assistant — Jul 2025 – present
Swinburne University of Technology, Melbourne, Australia

- Supporting research on EV participation, peer-to-peer energy trading and smart grid optimisation.

Grid Connection Engineer — Feb 2025 – May 2025
Siemens | Siemens–Swinburne Energy Transition Hub, Melbourne, Australia

- Carried out generator performance standard (GPS) studies and grid connection assessments for a 250 MW battery energy storage system, including steady-state and dynamic analysis of the South Australian network in PSS® E.
- Integrated releasable user guide (RUG) models into OPDMS network data and maintained .dyr dynamic model files for system-wide contingency and dynamic studies.
- Wrote Python scripts that automate compliance checks against dynamic performance standards in single-machine infinite bus (SMIB) and NEM-wide studies.

PhD Candidate Apr 2024 – present

Swinburne University of Technology, Melbourne, Australia

- Developed a two-stage, fuzzy-informed optimisation framework that reduces peak load through hierarchical EV charging management (Journal of Energy Storage, 2025).
- Designed a state-of-charge-aware EV charging strategy and studied its effect on distribution network voltage (IEEE ETFG 2025), and the impact of charging station placement on hybrid microgrids (IEEE AUPEC 2025).
- Reviewed the role of EVs in peer-to-peer energy networks; selected as the cover article of World Electric Vehicle Journal, August 2026.

Research Associate Jan 2021 – Mar 2023

Department of Electrical Engineering, Aligarh Muslim University, India | *UGC DRS project, Government of India*

- Designed and experimentally validated transducer circuits and industrial prototypes for measuring real and reactive power, for voltage control and stability of smart grids and microgrids.
- Work led to two journal papers (IEEE Sensors Journal; Sensors and Actuators A) and a published patent.

Patent

P1 **M. K. Ikram**, "Measurement of real and reactive power using controlled rectifiers," Indian Patent Publication No. 202111049908 A, published in the *Official Journal of the Patent Office*, Issue 46/2021, Nov. 2021.

Teaching

Sessional Lecturer Aug 2025 – present

Swinburne University of Technology, Melbourne, Australia

- Design of Smart Power Grids (EEE80020 postgraduate; EEE40016 undergraduate): smart grid technologies, renewable integration and energy management. Developed course materials, lab exercises and assessments.
- Engineering Technologies with Indigenous Context (ENG10006): engineering from Aboriginal perspectives.

MATLAB Trainer Oct 2021 – May 2022

Arena Multimedia, Aligarh, India

- Trained more than 120 undergraduate students in MATLAB, Simulink and electrical engineering applications.

Teaching Assistant Feb 2019 – May 2020

Aligarh Muslim University, India

- Supervised instrumentation and control, electric machines and microprocessor labs for cohorts of up to 120 students.

Awards and Recognition

Cover article, World Electric Vehicle Journal, Vol. 17, Issue 8 2026

Siemens–Swinburne Energy Transition Hub PhD Scholarship (fully funded) 2024 – 2027

National GATE Scholarship, MHRD, Government of India 2018 – 2020

GATE Electrical Engineering: 95th percentile, ranked 5,059 of 93,526 candidates.

Service and Leadership

Academic Senator (elected HDR student representative) Jan 2026 – present

Swinburne University of Technology

- Represents postgraduate research students in university Senate and committee discussions on research and academic policy.

Technical Chair

International academic conference

Conference Presentations

IEEE ETFG 2025, Wollongong, Australia Dec 2025

IEEE AUPEC 2025, Brisbane, Australia 2025

Energy Consortium, Melbourne, Australia Nov 2024

IEEE ICCCA 2021, Arad, Romania Dec 2021

Springer ICCAI 2021, Mathura, India Nov 2021

Professional Training

- PSS® E industry training, Modules 1 and 2, Siemens–Swinburne Energy Transition Hub
- PSS® SINCAL industry training, Siemens–Swinburne Energy Transition Hub
- Solar Rooftop Grid Engineer, National Institute of Solar Energy, India (2019)

Skills

Power system simulation: PSS® E, PSS® SINCAL, MATLAB/Simulink

Optimisation and automation: Python (NumPy, Pandas, CVXPY), IBM ILOG CPLEX

Hardware and testing: Power electronics, sensor interfacing, analog circuits, electronic system design

Data and documents: Python (Matplotlib), Excel, LaTeX

Languages: English (full professional), Urdu and Hindi (native)

Referees

Available on request.
